

## OPEN DATA PROJECT FOR SCHOOLS CHRISTMAS JUMPER DAY ATTENDANCE

### MANAGING ATTENDANCE DATA

In December 2018 askEddi and the Association of School and College Leaders (ASCL) brought together a steering group of 12 head teachers across Liverpool, Tameside, Lancashire and Derbyshire on a unique pilot to find ways to improve attendance, to work smarter and innovate on ideas to develop wide-reaching, regional solutions to attendance issues.

Using smart data dashboards to improve best practice and intervention strategies, we have demonstrated that key events can impact on school attendance, and this knowledge can be used by schools to take action. Using data mining and data analytics techniques we have developed an accurate data story, identifying patterns and behaviour variances.

### RETHINKING CHRISTMAS JUMPER DAY

"Our first major insight came in December 2018 when we reviewed at the first month's data and noticed low attendance on 14th December. Most of the participating schools had similar attendance figures on that day so, as a group, we looked more closely to see if there was a pattern.

The pilot group checked to see if it was a snow day, or a city-wide event, but the common theme is that it was Christmas Jumper day – a relatively new fundraising event in the style of Jeans for Genes or Wear It Pink. Children were invited to wear festive jumpers for the day and donate to charity.

What schools hadn't realised, is that in many less-affluent areas, the addition of another day which required the purchase of a specific item of clothing, plus an expected donation, meant that parents chose to keep children home, or the children themselves chose not to attend to avoid peer pressure.

### THE OPEN DATA PROJECT FOR SCHOOLS

Working with our pilot schools and ASCL as part of the Open Data Project for Schools, we developed our smart dashboard solution to help schools understand and manage their attendance.

The dashboard is simple to use and securely takes data from schools' existing management information system.

The findings from our pilot groups have shaped how the data is modelled, presented and used within schools to support attendance intervention strategies.

“WE CAN NOW IDENTIFY WHICH DAYS OF THE WEEK OR MONTH ARE A PATTERN FOR ATTENDANCE.

IS IT BIRTHDAYS, SCHOOL EVENTS, SPECIFIC TIMES OF THE DAY?"

## ADAPTING AND EVOLVING

Further analysis showed the impact more acutely across disadvantaged cohorts of pupil premium pupils which include free school meals.

Schools plan to action the findings this year by organising alternative activities that don't involve specific clothes or additional expenditure, or by holding "jumper amnesty" earlier in December for families to donate or exchange last year's jumper for a different size or design.

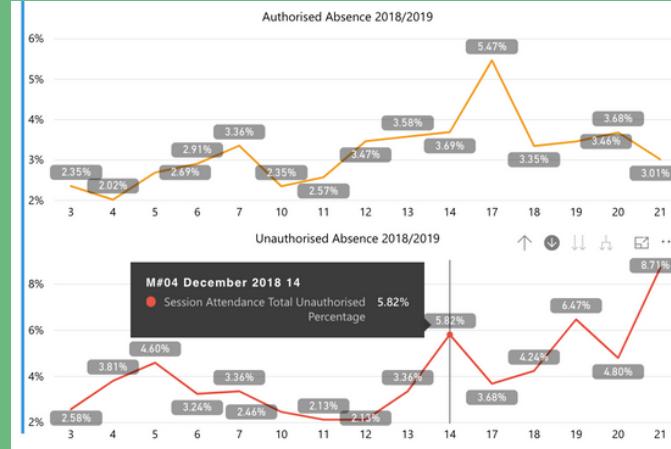

### SCHOOL 1:

- Noticeable decrease in whole school attendance on 14th December
- Increase in authorised absence on the 14th December (parents keeping children home and reporting illness).
- Increase in unauthorised absence compared to the previous day (almost double).

### SCHOOL 2:

- Focusing on Pupil Premium-specific cohort, we see a 3% rise in unauthorised attendance versus the previous week,

"OUR ATTENDANCE OFFICERS ARE LOOKING AT THE DATA TO SEE THE STORY BEHIND IT. WHERE IT MIGHT TAKE HOURS TO GET THAT INFORMATION PREVIOUSLY, IF AT ALL, NOW WE CAN DO IT IN 20 MINUTES."

DAVID WAUGH, HEAD TEACHER, POYNTON HIGH SCHOOL

## ATTENDANCE MATTERS

AskEddi's core product Attendance Matters has been developed with the Association of School and College Leaders (ASCL) to provide a straightforward, highly effective attendance analysis system that works with your existing MIS. This means that you and your team have more time to act and deliver impact where it matters.

**WHEN YOU JOIN THE OPEN DATA PROJECT FOR SCHOOLS, YOU CAN USE OUR WHOLE SCHOOL IMPROVEMENT PLATFORM TO MAKE A DIFFERENCE STRAIGHT AWAY.**
